

# Wild Animals

Written by Isabelle Tin-Aung

Some animals are wild animals. Lions are wild animals. They eat meat. They eat gazelles and zebras.

Tigers are also wild animals and they eat meat. They live in the warm jungles of Asia.

Another wild animal is a bear. It lives in the woods and in the mountains. It eats fish. It catches fish in the river.

One type of bear is a polar bear.  
A polar bear eats seals. It lives in a  
place full of ice and snow!  
It catches seals under the ice. Polar  
bears live in very cold places.

Elephants are  
wild animals.  
They are very big!  
They eat grass, leaves  
and fruit.

This is a gorilla. Gorillas  
live for 50 years. They eat  
leaves and fruit, too.
