### Park clean

Hi guys! I just got back from my holiday in Cornwall a few days ago. It's in the south-west of England and the beaches are amazing down there. And now I'm back and I am feeling inspired! Every time I went to the beach, I saw people taking part in a 'beach clean'. In Cornwall, people are encouraged to pick up litter every time they go to the beach! Then they post photos of what has been collected on social media. These beach cleans have become really popular and they've reduced the amount of waste on beaches all over the country. So, I've decided to do it too. The only problem is, I live here – 300 miles from Cornwall and almost 100 miles from the coast! But I'm not giving up! Instead, I've started my town's first ever *park* clean. And this is what I collected! Plastic bags, bottles, cans ... all this litter had just been left there! It just looks horrible! And it's really bad for the environment. You should see the water in the park's pond. It's disgusting! I'm sure you guys have similar problems in parks near you. So, why not come and join me? All you have to do is pick up as much litter as you can every time you go to the park. Then, before you throw it away, take a picture, post it online and tag it with the hashtag #myparkclean. Let's get this going! If we can clean the beaches, we can clean the parks too!

## Real-world speaking video

- Laura:** I need a new cell phone. Do you know if there are any eco-friendly ones?
- Marta:** Let's see ... These two are more eco-friendly than most phones.
- Laura:** Why's that?
- Marta:** Well, this one creates less waste. The case is made of recycled plastic and it's easy to repair.
- Laura:** That's great! So it lasts longer than most phones. What about the other one?
- Marta:** It also uses recycled materials but you can't repair it easily.
- Laura:** What about quality? Are other smartphones better than these two?
- Marta:** I'd say they're as good as most smartphones. The camera on this one is great. It lets you take amazing photos, even at night.
- Laura:** Sounds good.
- Marta:** How much are you thinking of spending?

- Laura:** Oh, the cheaper, the better!
- Marta:** I'd get the second one, then. Not only is it green, but it's also a great deal.

## Project video

- Julia:** Hello! Today we're going to talk to you about this leaflet we made. We've decided to talk about food waste, as we believe it's a very important topic.
- Theo:** We wanted to make this leaflet look colourful and attractive, so we chose green for the background.
- Julia:** We also chose some bright and pretty photos of different types of fruit.
- Theo:** Now as you can see, we have included two main sections. These are called 'Could your food save the planet?' and 'Reducing food waste to fight climate change!'
- Julia:** Do these give you an idea of what the leaflet is about? Do they make you want to read more?
- Theo:** Hopefully your answer is yes!
- Julia:** We also added clear headings within each section ...
- Theo:** ... which are 'Why is food waste a problem?', 'Did you know?' and 'What can you do?'. These make the leaflet easier to read.
- Julia:** In the part about why food waste is a problem, we give an example to help people understand what food waste is and the consequences of producing and wasting too much food.
- Theo:** In the 'Did you know?' section, a number of facts and figures are given that show how much food is wasted around the world.
- Julia:** As you can see, in the 'What can you do' part, we've included some easy practical advice to reduce food waste. For example, we have two things you shouldn't do: 'Don't buy too much food' and 'don't throw food away'.
- Theo:** And four things you should do: 'Serve smaller portions,' 'organise your cupboards and fridges' ...
- Julia:** 'Store your food correctly', and 'Understand dates.'

## Student's Book Videoscript

**Theo:** So, this is our leaflet. We have talked about why food waste is a problem, and given you some ideas to improve the situation. We hope it was useful.

**Julia:** Does anyone have any questions?
